Influencing Policy  11
Statement of Activities  13
The threats and battle lines are continually changing in the fight for our rainforests.

One thing that is constant is the reality that the people that have the most to gain from forest protection and the most to lose from its destruction are the indigenous peoples whose livelihoods, health and cultures are dependent on healthy rainforest environments.

The Rainforest Foundation has never veered from its mission to conserve the world’s rainforests by helping the long time stewards of these forests to secure their rights and sustainably manage their natural resources.

What becomes clearer with every passing year is that this approach is working. The forests that are best conserved are those where indigenous peoples live and have secure rights to their lands and resources. This is not an accident.

That’s why we target your support to the people and places that can make the biggest difference: indigenous communities living at the frontlines of rainforest protection.

We have learned that the key to securing rights and maintaining conservation gains is strong leaders at the local level who are dedicated to sustainable management of their resources for their community. You will read in this report how this approach is making a difference.

None of our work could be done without your generous support. You are helping local communities protect their forests, livelihoods and their cultures for generations to come.

Sincerely,

The Rainforest Foundation US is a small organization on a big mission: A mission to protect lands, protect lives, protect cultures and traditions, protect our planet. We have a remarkable record of success. How do we do it?

We partner with those people who live in and depend on rainforests for their living, and for their way of life. By assisting these people in securing and maintaining the rights to THEIR lands, we are able to leverage our small resources in a big way.

We fund local organizations of indigenous peoples who are fighting legal and regulatory battles in order protect the rights to their lands – and once secured, we help these people keep their rights, for themselves and for future generations.

In 2013 we focused our work in two countries in Central and South America: Panama and Peru. Each of these countries has a high proportion of at-risk indigenous cultures who live in and depend on unique and irreplaceable rainforest.

None of our work could be done without your generous support. You are helping local communities protect their forests, livelihoods and their cultures for generations to come.

Sincerely,

The Rainforest Foundation US Annual Report 2013

Joanne Pellegrino
Executive Director

John Copleand
Chairman, Board of Directors
Securing Rights, Protecting Lands

RAINFOREST FOUNDATION US Mission

To support indigenous and traditional peoples of the world’s rainforests in their efforts to protect their environment and their rights.

We believe that forest protection and human rights are interconnected. We believe that the most effective way to protect rainforests is to ensure that indigenous communities who have historically managed and protected these forests have secure and long term rights to their lands and resources.

How we work

The Rainforest Foundation provides direct financial support and hands-on technical support to indigenous communities and local grassroots organizations. We work with them to:

- Gain official control of their land and resources.
- Participate in the legal and policy decisions that affect their rights and resources.
- Build strong local leaders and organizations that can defend their community’s rights in the future.

With secure rights to their land and livelihoods, indigenous peoples are the rainforest’s most effective guardians.

RAINFOREST FOUNDATION US Achievements

For 23 years we have helped protect both the incredibly rich biological diversity of the rainforest and the cultural integrity of the peoples whose lives and livelihoods are inextricably linked to these forests. Together with our partners we have:

- Protected +28 million acres of rainforest.
- Won several precedent-setting national and international legal battles for the indigenous peoples’ rights.
- Strengthened dozens of local indigenous organizations that are defending their rights and the lands of +200,000 indigenous peoples.
One single tree in Peru can harbor forty-three different species of ants - a total that approximates the entire number of ant species in the British Isles.
Indigenous groups face significant legal, technical and cultural hurdles to obtaining legal recognition of their land rights, including:

- Inadequate national legislation
- Difficulties with accurate marking of boundaries
- Lack of good maps and documentation
- Historic discrimination
- Unfamiliarity with legal systems
- Geographic isolation

With secure rights to their lands and natural resources, indigenous peoples can better defend their communities against unwanted development pressures and pursue sustainable development activities on their terms. Today, most of the world’s large tracts of conserved tropical forests today are in the hands of indigenous peoples. With secure rights to their lands, indigenous people are the most effective guardians.

Challenges

Our Response

- Providing legal and technical support for the titling and demarcation of indigenous territories, including mapping their boundaries, documenting land claims, and assisting with complex administrative and legal procedures.
- Training and assisting indigenous leaders in negotiating with relevant government authorities to gain formal legal recognition of traditional lands and territories.
- Supporting traditional community decision-making processes relating to protecting and sustainably managing lands.

The Wounaan and Embera number some 28,000 people living in communities spread throughout the Darién - the largest remaining stretch of tropical forest in Panama. These lands include significant swaths of largely untouched rainforest, some of the most intact mangrove and lowland forest ecosystems in Panama, and ecologically important rivers and estuaries. Both the Embera and the Wounaan depend on their natural environment for their livelihood, as well as their cultural and spiritual practices. They live much as their ancestors did generations before, gathering fruits and medicinal plants from the forests, fishing in the rivers and estuaries, hunting game, farming small plots of land, and making crafts, tools, and houses from a variety of forest products. Recent data has shown that about one third of Panama is indigenous lands (recognized and claimed) and that 60% of the country’s rainforests are in these areas. Dozens of Embera and Wounaan communities remain without official title to their collective lands, however, leaving them vulnerable to invasions by cattle ranchers, loggers and others. Without secure title to their ancestral lands, these indigenous communities have had little ability to evict intruders and effectively protect their forests.

Our Role

The Rainforest Foundation has worked with representative organizations of the Embera and Wounaan on fulfilling all of the legal and administrative procedures related to gaining titles to their lands. With support from the Rainforest Fund and the Margaret A. Cargill Foundation, we’ve been able to provide these local organizations with the funds and technical expertise necessary to advance their cause.

Recent results

In 2013 we began working with Embera communities and continued our partnership with the Wounaan for the fourth year. Following the successful titling of two collective lands last year, we continued to focus on land demarcation: including conducting legal work, negotiating with government agencies for the recognition of Wounaan and Embera traditional lands, and verifying boundaries using participatory mapping techniques. We also began supporting a process of land management planning, strengthening partner organizations including through a variety of capacity building workshops.
Indigenous communities in the rainforest face frequent threats to their homes and livelihoods from land invasions, illegal resource extraction, and the undermining of their rights at the local and national levels. When faced with such challenges, these communities often lack the information and resources necessary to exercise their rights and advocate on their own behalf.

At the same time, indigenous peoples are also increasingly managing health, education, and development initiatives for their communities. To effectively combat these threats while seizing upon these new opportunities, indigenous groups need strong and effective leaders as well as robust and culturally appropriate processes and local institutions.

### Challenges

- In spite of international declarations in their favor, notably the United Nations Declaration of the Rights of Indigenous Peoples, indigenous peoples are often not respected, nor even recognized, as rights holders.
- Traditional indigenous governance practices and structures are often not respected by local and national authorities, and in many cases have been weakened by outside pressures.
- Many indigenous leaders are not aware of their rights and do not have the technical or professional skills necessary to defend their rights and advocate nationally on behalf of their communities.
- Representative indigenous organizations are often new and under-resourced, in terms of staff, expertise, and funding.

### Our Response

- Providing technical support, legal guidance, and funding for community training workshops. This training helps build stronger and more autonomous local organizations and enables leaders to effectively represent their communities’ interests.
- Developing and distributing practical training tools. These customized resources help local leaders build administratively and financially strong organizations that are capable of managing social and economic development projects on their lands.
- Assisting communities in formalizing their traditional governance practices to ensure that they are acknowledged and respected by local and national authorities.
In recent years there has been an increased focus on the development of international and national policies aimed to combat rainforest loss. Indigenous people’s lands contain some of the last remaining expanses of intact rainforest, meaning that these communities are suddenly finding themselves at the center of major policy debates on natural resource extraction and climate change.

Challenges

• Policies designed to protect indigenous lands and resources are often weak and in many cases are simply disregarded.

• Indigenous peoples face strong pressure to participate in development initiatives, but in many countries government consultations are rushed and have not allowed time for the communities to understand complex concepts and programs, seek independent consultations, or have adequate internal discussions to decide if and how they want to participate.

• Many indigenous peoples do not have the knowledge and training required to participate fully and effectively in the design of policies that affect them and their resources.

Our Response

• Providing indigenous peoples with independent and balanced information about climate change science, development projects, indigenous rights and international policy. We develop and adapt training materials, as well as support and participate in local workshops and national level trainings for leaders.

• Supporting the informed and effective participation of indigenous peoples in local, regional and national policy discussions. We help indigenous leaders communicate and meet with policy makers.

• Providing legal and technical support to indigenous groups as they analyze development programs, define their priorities, and defend their rights to free, prior and informed consent to activities that affect their lands or peoples.

The Rainforest Foundation was founded in 1989 by Sting and Trudie Styler. In the last 23 years, the Foundation has expanded and diversified, and now includes three autonomous organizations – Rainforest Foundation US, Rainforest Foundation Norway and Rainforest Foundation UK – as well as The Rainforest Fund, which provides funding to programs and projects that support indigenous peoples. Together, we support programs in 20 countries across all the major tropical rainforest regions of the world.
